Võ Đức Tài

Full-stack Developer

PERSONAL INFORMATION

M 0382907147

01/12/2000

@ vo1122000@gmail.com

Ba Đình, Hà Nội

W https://vdtai-portfolio.web.app

OBJECTIVE

Full-stack Developer (4+ years) with hands-on experience across both frontend (React, Next.js) and backend (NestJS, Node.js, Kafka, Redis, PostgreSQL), currently building production systems for Japanese clients. Seeking to grow into a Bridge Engineer role through the Go Japan Skill Up Program, combining technical depth with Japanese communication skills and cross-team coordination between Japanese clients and Vietnamese development teams.

CAREER GOAL IN JAPAN

- Grow as a Full-stack Engineer with system-level ownership (frontend + backend + architecture)
- Improve Japanese to business level (N4 → N2)
- Become a Bridge SE (BrSE) connecting Japanese clients and Vietnamese development teams

EDUCATION

FPT University 2018 - 2022

Major: Software Engineering

Graduation Project: Freelance Services Web App (ReactJS + Java + MongoDB) — *Tech Lead Role*

WORK EXPERIENCE

Wasabi (Outsourcing Projects for Japanese Clients)

05/2024 - Present

FULL-STACK DEVELOPER

- Developed full-stack features for Japanese client systems (exam registration, booking platforms) — Next.js/React on the frontend, NestJS/MySQL on the backend
- Designed reusable component architecture and optimized performance (lazy loading, caching, SWR) to improve responsiveness and maintainability
- Built and integrated RESTful APIs for reporting, user management, and PDF certificate generation, including debugging backend data and query issues
- Collaborated with BA, backend, and QA teams in an agile environment, aligning technical solutions with business requirements
- Mentored junior developers, conducted code reviews, and contributed to improving overall team productivity

Vbee (AI Product Team)

09/2022 - 04/2024

FULL-STACK DEVELOPER

- Developed AI-powered platforms (AI Voice, AI Call Center) end-to-end: React/Redux frontend plus Node.js backend services using Kafka for event streaming and Redis for caching/rate limiting
- Implemented real-time features with Socket.IO/WebSocket for live call status and audio processing feedback
- Built and maintained backend cron jobs and queue-based workers for automated campaign processing, including handling concurrency issues (duplicate call assignment, stuck/zombie jobs)
- Built dynamic dashboards and reusable UI components to support flexible call flows and large-scale usage
- Collaborated with cross-functional teams (PM, QA, backend) in agile development

PROJECTS

NK Class - Wasabi **06/2024 - Present**

Examination Registration System (Japan)

- Developed both frontend (Next.js/React) and backend (NestJS) for the exam registration system used by ClassNK
- Built streaming/background-job export for large report generation to avoid timeouts and memory overload
- Optimized complex multi-table JOIN queries and added Redis caching for frequently accessed course/user data
- Built reusable component architecture and optimized data fetching using SWR on the frontend

Technologies: Next.js, React, TailwindCSS, Ant Design, SWR, NestJS, PostgreSQL, Redis

Tobutoptour - Wasabi **06/2025 - 10/2025**

SKILLS

FRONTEND

React.js, Next.js, TypeScript, TailwindCSS, Ant Design, Redux Toolkit, Redux Saga

BACKEND

Node.js (Express, NestJS), RESTful & WebSocket API design, Kafka (event-driven architecture), Redis (caching, distributed lock, rate limiting), background jobs / cron / queue processing

DATABASES

PostgreSQL, MySQL, MongoDB, Redis

ARCHITECTURE & PERFORMANCE

Component-based design, distributed-system concurrency handling (idempotency, race-condition prevention), caching strategy, streaming for large data export, applied SOLID, DRY, KISS principles

DEVOPS & TOOLS

Git, Docker (basic), CI/CD (GitHub Actions), AWS (Cloud Practitioner — in progress)

OTHERS

Agile/Scrum, mentoring, code review, cross-functional collaboration (BA, backend, QA)

LANGUAGES:

Japanese: JLPT N4 (currently improving toward N2) — experience working directly with Japanese clients
English: Technical reading

Scheduling and booking system for Tobu, used by medical companies and healthcare staff in Japan.

- Designed the backend booking lifecycle as an explicit state machine (pending → confirmed → cancelled → refunded) to prevent invalid transitions
- Fixed a cross-timezone bug causing incorrect booking date display, by normalizing all date handling to UTC
- Developed frontend UI components and form management to support complex scheduling workflows
- Integrated backend APIs for user management and optimized UI/UX across devices

Technologies: Next.js, React, TailwindCSS, Ant Design, SWR, NestJS, PostgreSQL

AI Call Center - Vbee 04/2023 - 04/2024

AI-powered call center system that automates outbound calling and conversation analysis for enterprise clients.

- Built the event-driven backend architecture using Kafka for call events and Socket.IO for real-time status updates to the frontend
- Solved a race condition where multiple workers picked up the same call, using atomic `findOneAndUpdate`/upsert operations for idempotency
- Implemented a cleanup cron job to detect and reset zombie/stuck jobs, plus a Redis-based distributed lock to prevent cache stampede across instances
- Developed the React-based agent dashboard displaying call status, history, and interaction data

Technologies: React, Redux Toolkit, Node.js, Express.js, MongoDB, Redis, Socket.IO, Kafka

AI Voice - Vbee 09-2022 - 04/2023

Text-to-Speech Platform

- Designed a Redis cache keyed by content hash to reuse previously generated audio for identical inputs
- Implemented a queue-based architecture to offload heavy TTS generation and fetch results asynchronously
- Fixed an OOM crash by switching from full-response buffering to streaming output for large audio files
- Built a Redis-based sliding-window rate limiter to protect the upstream AI API from overload
- Developed the frontend UI for generating/managing AI voices with real-time WebSocket feedback

Technologies: React, Redux Saga, WebSocket, Node.js, Redis

Landing Page Projects (Wasabi - Vbee) 09-2022 - Present

(Various corporate and product landing pages: **NK Portal, Untensha Shokuba, AI Hub, Mobiva, VBee**)

- Developed multiple landing pages using Next.js and TailwindCSS for various products and clients
- Optimized SEO performance (Lighthouse SEO > 80) and responsive design
- Integrated Google Sheets and Apps Script to enable content management for non-technical users, including Japanese clients

Technologies: Next.js, TailwindCSS, WordPress, Google Apps Script
